Detailed Office Action

Election/Restriction

Applicant's election with traverse of species IV corresponding to Fig 6, claims 1-2,4-5,12-13,15-16,21-24,26-27,34-35,37-38,43-46,48,50-51 in Paper No. 5 is acknowledged. The traversal is on the ground(s) that examining the entire application would not place a serious burden on the Examiner. This is not found persuasive because the species have different arrangements and they require different search and consideration.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 U.S.C. § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 21-22 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 21,22, lines 2-3, the phrase "whereby light output from the second terminal of the optical distributor is increase" is not clear. Does Applicant mean increasing "the intensity of the light output from the second terminal"?

Claim Rejections - 35 U.S.C. § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2,4-5,12-13,21-22,45-46,48,50-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arditty et al (5,056,919) in view of Blake et al (5,377,283).

With respect to claims 1-2,45-46,48,50-51, Arditty discloses a device for measuring a phase shift. The device comprising: a light source S (fig 8), an optical distributor M (fig 8), an optical modulation means (fig 8), means for outputting the return beam M (fig 8), a detector D (fig 8).

Arditty does not disclose means for relating an intensity of the detected light to an optical modulation frequency. Blake disclose a system which relates the intensity of the detector 14 (fig 2) with the optical modulation 20 (fig 2). It would have been obvious to modify Arditty's system with Blake to calculate the dispersion of an optical component.

With respect to claims 4-5, Arditty does not disclose a wavelength-tunable light beam. However, the claimed wavelength-tunable light beam would have been known in the art. It would have been obvious to modify Arditty's light source with a known wavelength-tunable light beam source to select the wavelength of output beam easier.

With respect to claims 12-13, Blake does not disclose a measurement object located on part of the optical path. However, it would have been obvious to substitute the coil 10 (fig 6) with a measurement object to measure the dispersion of the test object.

With respect to claims 21-22, the claimed 90-degree Faraday rotator would have been known. It would have been obvious to modify Arditty's system with the known 90-degree Faraday to distinguish the modulated and the un-modulated lights.

Allowable Subject Matter

Claims 15-16,23-24,26-27,34-35,37-38,43-44 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior arts of record does not disclose an optical reflection means or a pair of optical modulators having mutually opposed forward modulation directions as claimed in combination with all the limitations in the base claim.
